COMMITMENT – What We Believe In

Our purpose and commitment are to improve lives by transforming minerals into well-being. Sustainability is an essential part of our business strategy and is reflected in how we work every day. It involves ensuring the safety and health of people, caring for the environment, maintaining responsible governance, respecting the communities where we operate, and generating value for our various stakeholders.

VISION – What we aim for

- To implement efficient governance and management systems that enable us to ensure ethical conduct and integrate sustainability matters into decision-making at all stages of the business.
- To care for the environment and natural resources—water, soil, air, and biodiversity—by preventing contamination risks and potential negative environmental impacts.
- To promote circular economy approaches that reduce the consumption of new materials and resources, fostering the reuse of existing ones, including waste and tailings.
- To encourage energy efficiency measures, emission reductions, and the use of renewable energy.
- To build trust-based relationships through respectful conduct with stakeholders, fulfilling commitments through clear and transparent communication.
- To share value with communities within our area of influence, generating sustainable development opportunities through a participatory approach, respecting local culture, rights, and interests.

STRATEGY – What we commit to

- To achieve our vision in sustainability governance, TABOCA is committed to gradually planning the following objectives:
- To achieve our vision in sustainability governance, TABOCA is committed to gradually planning the following objectives:
- To identify, assess, and proactively manage risks in our operations to prevent actual or potential socio-environmental impacts and risks to business objectives.
- To develop products with the highest quality standards and in line with best practices, ensuring responsible supply to our customers.
- To promote the creation of strategic partnerships, innovative solutions, and the use of new technologies to support water reuse and recirculation.
- To periodically measure our environmental, social, and governance performance and communicate our results clearly and in a timely manner.

This policy will be reviewed and updated every 3 years or earlier, if necessary.
